Few suggestions

| Method | Frobnability | | | | | | | |
|--------|------------------------|--|--|--|--|--|--|--|
| Theirs | Frumpy | | | | | | | |
| Yours | Frobbly | | | | | | | |
| Ours | Makes one's heart Frob | | | | | | | |

Table 1.1: Results. Ours is better.

1.2.1 Mathematics

Please number all of your sections and displayed equations. It is important for readers to be able to refer to any particular equation. Just because you didn't refer to it in the text doesn't mean some future reader might not need to refer to it. It is cumbersome to have to use circumlocutions like "the equation second from the top of page 3 column 1". (Note that the ruler will not be present in the final copy, so is not an alternative to equation numbers). All authors will benefit from reading Mermin's description of how to write mathematics (see math.pdf).

1.2.2 Footnotes

Please use footnotes¹ sparingly. Indeed, try to avoid footnotes altogether and include necessary peripheral observations in the text (within parentheses, if you prefer, as in this sentence). If you wish to use a footnote, place it at the bottom of the column on the page on which it is referenced. Use Times 8-point type, single-spaced.

1.2.3 References

List and number all bibliographical references in 9-point Times, single-spaced, at the end of your paper. When referenced in the text, enclose the citation number in square brackets, for example [2]. Where appropriate, include the name(s) of editors of referenced books.

1.2.4 Illustrations, graphs, and photographs

All graphics should be centered. Please ensure that any point you wish to make is resolvable in a printed copy of the paper. Resize fonts in figures to match the font in the body text, and choose line widths which render effectively in print. Many readers (and reviewers), even of an electronic copy, will choose to print your paper in order to read it. You cannot insist that they do otherwise, and therefore must not assume that they can zoom in to see tiny details on a graphic.

Referring to [1], we state that so and so.

1.2.5 Color

Color is valuable, and will be visible to readers of the electronic copy. However ensure that, when printed on a monochrome printer, no important information is lost by the conversion to grayscale.

For more suggestions to improve your document, see preparationGuide.pdf

¹This is what a footnote looks like. It often distracts the reader from the main flow of the argument.

Chapter Name

2.1 SMPC Primitives

2.1.1 Oblivious Transfer

2.1.2 Shamir's Secret Sharing

In [3], Shamir proposes a way of sharing a secret among n players, such that any k or more players can reconstruct the secret, but no set of k-1 or less players can do so. This is called a (k,n) secret sharing scheme, and is achieved by using k degree polynomials as described follows:

```
Require: A player has a secret value v which he has to share select a random number r f(x) = v + r_1 x + r_2 x^2 + \ldots + r_k x^k for all players i do send the value v_i = f(i) = v + r_1 i + r_2 i^2 + \ldots + r_k i^k to player i end for
Ensure: each player has a share v_i of the secret v
```

Algorithm 1: On sharing a secret

2.1.2.1 Secret Addition

2.1.2.2 Secret Multiplication

2.1.3 Privacy Preserving Union

Chapter Name

- 3.1 Introduction to Robotics
- 3.2 Problems in Robotics
- 3.3 Localization
- 3.4 Global Localization
